## Nexus prime login

Select the timing, channel and frequency of your preferred communications and your patients will be sent automatically by sms, email and/or telephone. Bring patients to the door and save your staff time with our automated calls and appointment reminders. Prime NexusSM integrates perfectly with the main management systems of the practice so that appointment confirmations are automatically updated to the calendar of the practice management system. You need an effective system to view, evaluate and respond to your patient's comments. Prime NexusSM can help you do this with customizable patient surveys that you can send right after your appointment, when the office visit experience is still fresh in your mind. You can set up your message to include a short survey and an invitation to post reviews on Yelp, Google Plus, Health Notes, and/or Vital. In addition, we make it easy to respond to reviews in-app. A good patient relationship extends beyond a good visit to the office and timely appointment reminders. Communication between office visits is key to keeping up with your patients. With several pre-written personalised email campaigns, from trunk shows to happy birthday greetings, Prime NexusSM makes staying in touch easier than ever. Prime Nexus integrates perfectly with the main management systems of the practice so that appointment confirmations are automatically updated to the calendar of the practice management system. Place custom Scheduling Appointment links on your website, social networking pages, and directories. The scope instantly adds the Schedule Appointment button now to 80+ directories. Look how to do it. See how to build a more profitable practice with Prime Nexus Skip until the end of metadata Created by Ann Base, last modified by Karolin Hemmingsson on August 12, 2019 Go to metadata start (For feedback on product documentation: Select Reason for Contact: Feedback on Documentation.) Version: 3.11Release Date: 2019-11-07IntroductionSmart ID Identity Manager (PRIME) 3.11 was released today. For information on how to upgrade from PRIME 3.10 to 3.11, read this instruction: Prime 3.10 Update to PRIME 3.11.Main new featuresWith this release, the last steps have been taken to remove Java from customers: PKI encoding in PRIME Explorer is also possible through Personal Desktop App.Data Sync Proxy Enhanced Data Synchronization Proxy, the PRIME component to synchronize remote data sources through HTTPS connections, has been improved. It can now be easily configured in PRIME Designer, and it is possible to configure the proxy by data source. You can now decide which data source is connected to local network and that will go to a remote server. New administration user interface for PACS plugin configuration The backend Nexus PRIME PACS has a new configuration user interface. All PACS plugin settings can now be easily managed on an HTML5 front. You can set connections to the new PACS system and also manage custom configuration settings for each unique PACS system in the user interface. Detailed list of featuresJIRA featuresJIRA noDescriptionCRED-5146EJBCA plugin included in primeejbca connector standards is now included in the new PKI architecture as an internal plugin. In addition to improved security and simplified installation this also means that all standard workflows will work outside the box. Key Backup/ Key Recovery is performed through Nexus Certificate Manager (CM) (similar to the D-Trust and quovadis). For more information, see Integrate identity manager with enhanced EJBCACRED-7713Logging plugin for BPMN Save ServiceImproved for BPMN Save Service for better troubleshooting: The object ID and user and kernel template name can now be registered. CRED-7914 Standard servicetap to request command statusAdded a standard service task to receive feedback from the production of Nexus GO cards. With this PRIME service task you can update (for example, using a Batch Sync Job that runs periodically) the command status and RFID chip serials when production is done. See Card Production: Nexus GO Command Status in Card Production - Standard Service Tasks in Identity Manager.CRED-8341 The list of assigned user roles has been added A new view-based data source has been added to the data set settings. Based on this, a list of all functions assigned to users (Person CoreObjects) can be created by searching /Extended Search.CRED-8342Added standard service task to run SearchAdded a standard service task that can run search configurations in processes. Results lists will be available on the process map. This service task replaces searches with beans.xml and therefore significantly simplifies process search. Search based on old beans still works for compatibility reasons, but it is highly recommended to use the new standard service task. View Process: Run On-Process Search Task - Standard Service Tasks in Identity Manager.CRED-8343PKI Encoding in PRIME Explorer executed using personal desktop AppPKI encoding tasks (production task and card work) in PRIME Explorer, which are not based on the card SDK, are now run by using the app.cred-8471Improved desktop personal configuration of the standard service task asserting the configuration of the filter criteria to the standard service task assert has been improved. Parameters can now be dynamically added to the settings, and each filter criteria can be configured in a separate parameter. See Process: Assert Uniqueness Task a Process - Standard Service Tasks in Identity Manager for the new configuration. CRED-8490DataSyncProxy can be configured by Data PoolEn earlier versions, it was only possible to activate DataSyncProxy (to connect, to connect, to from a PRIME cloud service to a local data source) around the system. With this version, DataSyncProxy can be easily activated in PRIME Designer by Data Pool, so you can choose which data sources to connect directly to or through the proxy server. Read more here: Smart ID Agent (DataSyncProxy) at Identity Manager.CRED-8558Added standard service task to receive QuoVadisTo list issuing QuoVadis TLS server certificates, allowed domains must be registered in the QuoVadis account. To validate domain names as soon as possible in the application process, you can receive the valid domain list through this service task from your QuoVadis account and store it in a corresponding search table. See Save the list of prime domains to Various Standard Service Tasks in Identity Manager.CRED-8566The standard service task configuration supports drop-down lists The servicetimes task settings are based on other configuration elements (e.g. referencing a search configuration) that in earlier versions had to be entered manually. Standard service tasks now support drop-down lists to easily select these linked settings. In this version this can be used for the new Process: Run the search task in process - Standard service tasks in Identity Manager and for all personal messaging tasks - Standard service tasks in Identity Manager.CRED-8569 Form titles are simplified and alignedHeadlines used in forms (for PRIME Self-Service, PRIME Explorer, for CoreObject processes or views) are now simplified and more user-friendly. CRED-8620Thgoing Virtual Smartcard Provisioning has not been introduced in the Open Tasks listA parameter that prevents the BPMN engine from sending an ongoing Virtual Smartcard provisioning to the Open Tasks list. CRED-8698Sed standard service task to run script tasks A standard service task has been added that can run a script task (e.g. Groovy, BeanShell). This can be useful for batchSync Jobs to prevent the use of BPMN processes. Small changes (e.g. string concatenation or format change of field values) can now be made in a (fast) script instead of using less performing BPMN processes. View Process: Run Script in Process - Standard Service Tasks in Identity Manager.IDC-1257Introiting New Administration User Interface for backendprime PACS PACS PACS Backend now provides a user-friendly web interface to configure and manage the different PACS systems. The user interface includes standard connection settings, but you can also manage PACS-specific settings and features. PRSM-92Using BatchSync instead of the BPMN timer process Replaces all BPMN timer processes in standard packages with BatchSync Jobs to make configuration changes easier for administrators. PRSM-229 Introduction of new standard package search service task Replaced all bean-based searchexecutors in standard packages with the new standard search service task. JIRA ticket there was a problem with the standard service task Process: Copy LoggedIn user values to process the map when using it with LDAP/certified authentication. CRED-8287Fixed NullPointerException in the change passwords dialog when leaving new password blank. CRED-8447 Fixed size of checkboxes in PRIME Self-Service. The style is now aligned with the other elements of the shape. CRED-8470The velocityEngine log file was not needed and was a problem with the conversion of date when accessing Data Sources through DataSync Proxy.CRED-8562Fix a problem when deleting a tenant. CRED-8626In PRIME Self-Service, a problem has been fixed with the translation of template names and process IDs. CRED-8632The voting time in DFN PKI Connector has increased. CRED-8633Fix a problem in the handling of the session during PKI card encoding. Encoding was running in an unhand manipulated error state when changing cards during the card production process. CRED-8663 Fixed manipulation of the inner id corObject in the configuration of the data set. The data grouping has granted direct access to the read/writing of direct access to this field. That's changed. CRED-8685Fixed a problem with providing ECC certificates when running multiple INSTANCES of PRIME Explorer on a Tomcat.CRED-8686 When using coreObject results lists in user forms there were empty records when using multiple searches with different basic templates. This has now been fixed. CRED-8696There was a problem with translating custom buttons into user forms in PRIME Self-Service.CRED-8702There was a problem with maximum length field validation in user forms in prime self-service. CRED-8738Fixes a problem with multi-threading in number ranges. CRED-8844 Fixed a problem when deleting a tenant. IDC-1317Fix a problem with the withdrawal of the right to access rules. IDC-1327Fix a performance problem when sending rights requests to the message queue. PRSM-77Fixed a problem with error management when requesting rights in the physical access package. PRSM-142Fix a problem with broken dependencies when uploading the digital softtoken package ID. PRSM-192There was a problem in the softtoken recovery process. PRSM-194Fixed PERMISSION SETTINGS in the Digital ID package: the Block Certificates process has been removed from the PRIME auto-service panel. PRSM-206Added password forgotten link to first page of self-service login in default settings. PRSM-210Fixed a problem with the withdrawal of non-personal cards when the employee's registration closes. PRSM-212Fix a problem with the withdrawal of non-personal cards in the Smart ID. PRSM-214Fixed physical access package fixed a problem with error management when creating rights and responsible approvers in the physical access package. PRSM-220Fix some translations in the softtoken replacement process. PRSM-225Fix some broken dependencies and remove dead links in PRIME module packages. Important notes in this releaseSeveral beans in custom bean files have been removed. Therefore, the PRIME settings must be updated. For more information, see Update from PRIME 3.10 to PRIME 3.11.LimitationsFor information about limitations, see Limitations for manager for information about support, training and other services in your area, please visit our website at [www.nexusgroup.com/](http://www.nexusgroup.com/). SupportNexus offers maintenance and support services for Nexus PRIME to customers and partners. For more information, see Nexus support on [www.nexusgroup.com/support/](http://www.nexusgroup.com/support/) or contact your local sales representative. Representative.
